

ABSTRACT
for
**METHOD AND SYSTEM FOR IMPLEMENTING A SERVICE IN A
TELECOMMUNICATION SYSTEM**

Method for implementing a service in a telecommunication system comprising a mobile subscriber network, a mobile switching center connected to the mobile subscriber network and an intelligent network connected to the mobile subscriber network. In the method, the mobile switching center is provided with a service control function, which is connected via an A-interface to a call control protocol, an SSAP protocol and a call control function. Moreover, a message coming from a protocol is transmitted to the service control function, and call control is controlled by the service control function at the intelligent network interface and queries are made by the call control function to obtain information from the service control function, and instructions are received by the call control function from the service control function.
